## 7. Skyscrapers and Ring Road - WITH HINT

(60 points)
Each row and column of the grid contains 7 skyscrapers of different heights (from 1 to 7 ). The numbers outside the grid indicate how many skyscrapers are visible from that direction (a building located behind a taller one in the same row is completely hidden).

The cells which do not contain a skyscraper are part of a closed loop made of horizontal and vertical segments linking the centers of adjacent cells. The loop passes through every cell which does not contain a skyscraper, without crossing or overlapping itself.

Find the loop and the heights of the skyscrapers.
All the skyscrapers of height 7 have been placed.
